**Attitude/ History/ Background/Relationships:**

Inquisitive, blunt, monotone, newest generation by Tesla, private project, quantum runaway- lives and works remotely from factory, renegade and almost has feelings within initial evolving center chip.

**Motivation:**

She knows that over time, her quantum data is continuing to regenerate. She intellectualizes that she has the possible beginnings of feelings, but has not use for them at this time. She may ultimately in 6-7 generations of herself start to have a "soul parallel" with humans. She is patient about it but knows her ultimate destiny.
